Manual app packaging is a slow, repetitive grind.

Every time an admin wants to add an app to Intune, the same five steps run by hand.

Result: 30–60 minutes per app, repeated for every new version, across every tenant. Multiply by hundreds of apps and dozens of tenants and the cost is enormous.

IntuneGet at a glance.

A web app that turns every Winget package into a one-click Intune deployment.

10,000+

Winget applications

Curated, ready to deploy

1 click

From catalog to Intune

Detection rules pre-configured

Free

Open source, AGPL-3.0

Self-host or use the hosted edition

Curated catalog

Real-time status

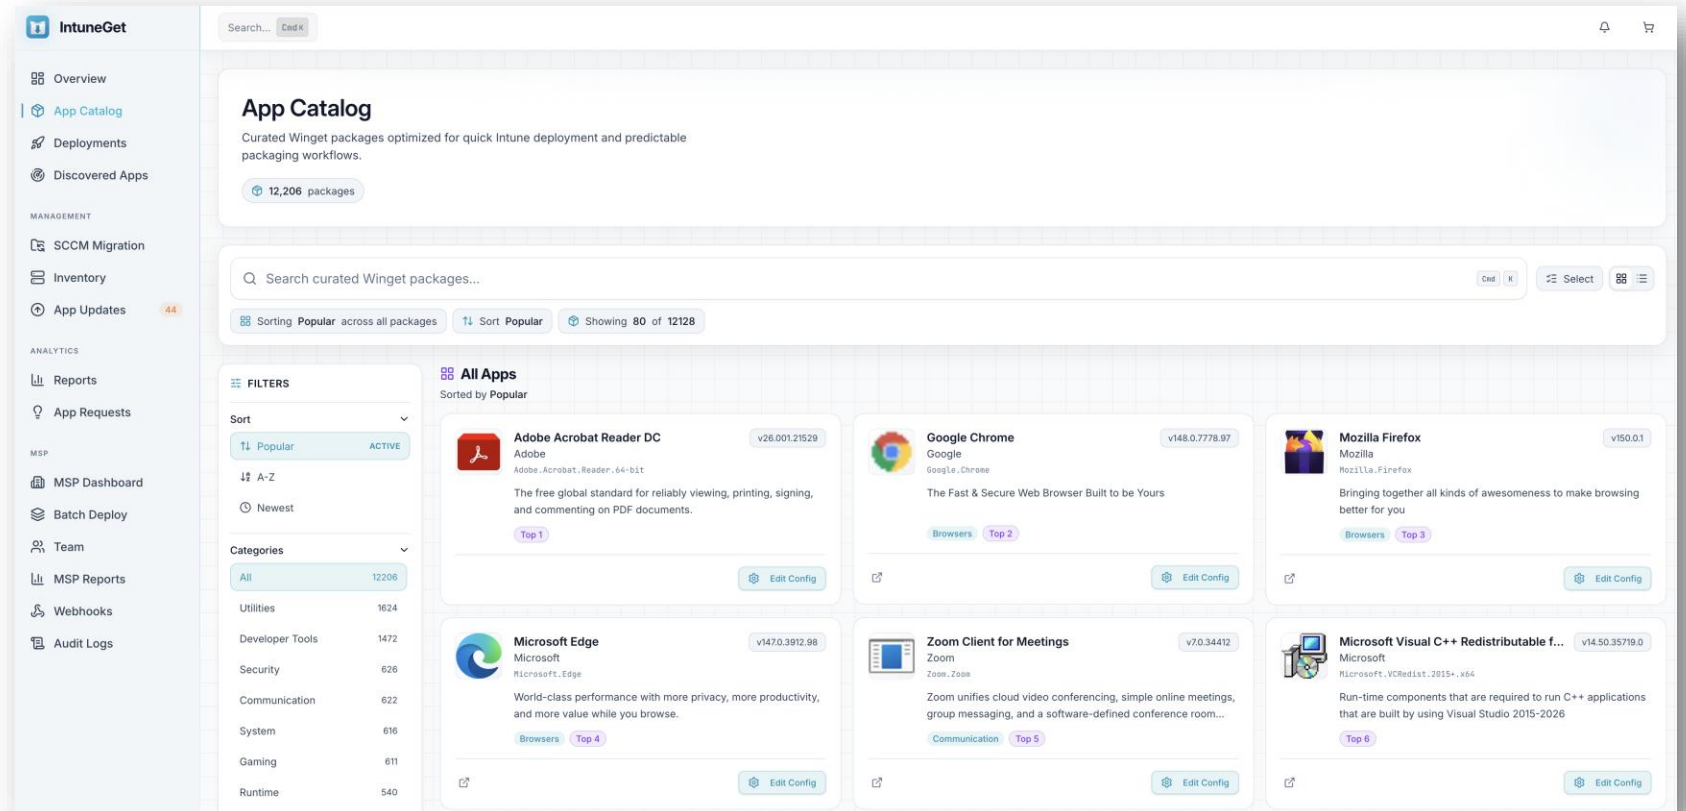

Multi-tenant

Webhook integrations

Self-hostable

Who uses IntuneGet?

- 6500 Admins have signed-in
- 18000 Apps Uploaded
- 290 MSPs

Built for IT admins.

Curated app catalog

10,000+ Winget applications, browsable and ready for Intune.

One-click deployment

Send an app straight to your tenant — no manual packaging.

Real-time status

Track deployment progress with live updates and clear states.

Pre-configured detection

Detection rules and metadata shipped with each catalog entry.

Community ratings

See how other admins rate apps before you deploy them.

PSADT v4 support

Use PowerShell App Deployment Toolkit v4 dialogs and process handling.

Built for managed service providers.

Multi-tenant support

Works with any Microsoft Entra ID tenant out of the box.

MSP mode

Manage many client tenants from one interface, fully isolated.

Batch deployments

Deploy one app to many tenants with configurable concurrency.

Role-based access

Owner, Admin, Operator, and Viewer roles with team management.

Webhook integrations

Slack, Teams, Discord, or custom endpoints with retries.

Audit logging

Full audit trail with IP and user agent in a dedicated viewer.

Advanced reporting

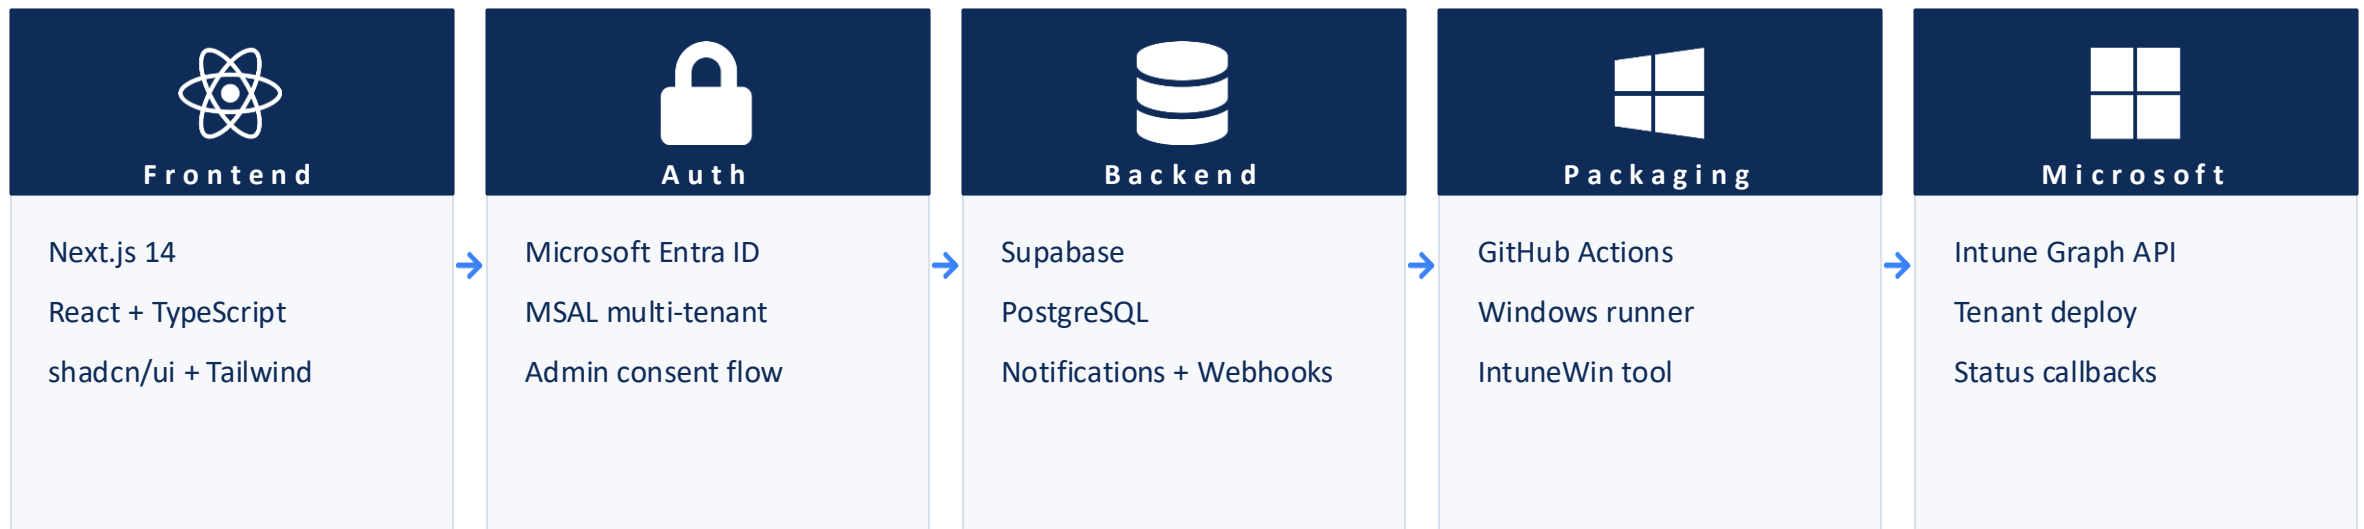

Cross-tenant trends, success rates, CSV/JSON/PDF export.

Tenant isolation

Each client's data is kept completely separate at the data layer.

How the pieces fit together.

End-to-end: browser to Intune tenant. Open source frontend, secure private packaging runner.

From browse to deployed in minutes.

01

Browse the catalog

Search 10,000+ Winget apps,
see ratings and metadata.

02

Click deploy

Pick the target tenant and
confirm in two clicks.

03

Packaging runs

GitHub Actions packages
.intunewin on a private
runner.

04

App lands in Intune

Detection rules and metadata
applied automatically.

05

Track and deliver

Real-time status, webhooks,
audit log, ratings update.

Security designed in, not bolted on.

Multi-repo design

Source code is public; workflow runs are private to protect tenant data.

No data storage

We do not store binaries or tenant credentials. Tokens are never persisted.

HMAC-SHA256 callbacks

Every callback is cryptographically signed and verified end-to-end.

Tenant isolation

Tenant IDs are masked in logs; row-level isolation in the database.

Audit logging

Every MSP action is logged with IP, user agent, and timestamp.

Air-gapped support

Run the local Windows packager and self-host the database.

Self-host the way you want to.

Deployment

- **Docker Compose**

Production self-hosting

- **Vercel**

Serverless, fastest setup

- **Full self-host**

Air-gapped friendly

Database

- **Supabase Cloud**

Managed, real-time

- **Self-hosted Supabase**

On your infra

- **SQLite**

Single file, dev or small

Packaging

- **GitHub Actions**

Cloud Windows runner

- **Local packager**

On-prem npm package

- **Air-gapped**

No external calls

Traditional workflow vs. IntuneGet.

What it is built on.

Next.js 14

App Router, server components

TypeScript 5

Strict typing across the stack

Tailwind + shadcn/ui

Composable, accessible UI

Supabase / Postgres

Realtime + row-level security

MSAL + Entra ID

Multi-tenant authentication

Zustand + TanStack

State + data fetching

Framer Motion

Polished, intentional motion

Vercel + Docker

Hosted or self-hosted

Hosted on Vercel. Containerised for self-hosting. CI on GitHub Actions.

Built in the open. Shaped by the community.

AGPL-3.0 licensed

github.com/ugurkocde/IntuneGet

- Self-host for internal business use
- Fork and modify for your team
- All commits live on GitHub
- Issues, PRs, and discussions welcome
